Proof of Recovery

Backup restore-test evidence - Dokaz

Verdict: PASSED

Drill ID	5022a415-d4dc-4721-b08a-6e22ccfd86c3
Target	Sample dataset (demo)
Source	postgres_dump_local: /data/sources/_dokaz_sample/sample.dump
Source SHA-256	7f1c641aeacf9c6792c8c479f7505752119c1b5f7f2dbd81426e8feb8119977a
Status	succeeded
Started	2026-10-12T19:47:14Z
Completed	2026-10-12T19:47:18Z
Duration	4.216s
RTO measured	119ms (restore wall-clock)
Generated	2026-10-12T19:47:18Z
Operator	e2e-f4cde34c6690@local.test

Steps

Name	Status	Started	Completed	Duration	Output SHA-256
provision	succeeded	2026-10-12T19:47:14Z	2026-10-12T19:47:14Z	180ms	-
fetch	succeeded	2026-10-12T19:47:15Z	2026-10-12T19:47:15Z	14ms	-
restore	succeeded	2026-10-12T19:47:16Z	2026-10-12T19:47:16Z	119ms	-
assert	succeeded	2026-10-12T19:47:17Z	2026-10-12T19:47:17Z	48ms	-

teardown	pending	-	-	-	-

Assertions

Kind	Expected	Actual	Result
table_exists	{"table":"events"}	{"exists":true,"table":"events"}	PASS

Compliance and insurance

This Proof-of-Recovery report is evidence that the backup above was restored and checked on the date shown. It supports the regularly-tested-backup requirements of ISO/IEC 27001:2022 Annex A 8.13 and the SOC 2 Availability criterion A1.3, and the restore-within-the-last-12-months evidence many cyber-insurance carriers require at renewal.

This report is sealed with a detached cryptographic signature over its SHA-256 digest; verify it from the drill detail page or with the open-source dokaz-verify tool against the published signing key.
